the emphasis of this book lies in the teaching of mathematical modeling rather than simply presenting models to this end the book starts with the simple discrete exponential growth model as a building block and successively refines it this involves adding variable growth rates multiple variables fitting growth rates to data including random elements

testing exactness of fit using computer simulations and moving to a continuous setting no advanced knowledge is assumed of the reader making this book suitable for elementary modeling courses the book can also be used to supplement courses in linear algebra differential equations probability theory and statistics

the bible is one of the books that has aroused the most interest throughout history to the present day however there is one topic that has mostly been neglected and which today constitutes one of the most emblematic elements of the visual culture in which we live immersed the language of colour colour is present in the biblical text from its beginning to its end but it has hardly been studied and we appear to have forgotten that the detailed study of the colour terms in the bible is essential to understanding the use and symbolism that the language of colour has acquired in the literature that has forged european culture and art the objective of the present study is to provide the modern reader with the meaning of colour terms of the lexical families related to the green tonality in order to determine whether they denote only color and if so what is the coloration expressed or whether together with the chromatic denotation another reality inseparable from colour underlies along with the chromatic denotation there is another underlying reality that is inseparable from colour we will study the symbolism that which underpins some of these colour terms and which european culture has inherited this lexicographical study requires a methodology that allows us to approach colour not in accordance with our modern and abstract concept of colour but with the concept of the ancient civilations this is why the concept of colour that emerges from each of the versions of the bible is studied and compared with that found in theoretical reflection in both greek and latin colour thus emerges as a concrete reality visible on the surface of objects reflecting in many cases not an intrinsic quality but their state this concept has a reflection in the biblical languages since the terms of colour always describe an entity in this sense one can say that they are embodied and include within them a wide chromatic spectrum that is they are mostly polysemic structuralism through the componential analysis although providing interesting contributions had at the same time serious shortcomings when it came to the study of colour these were addressed through the theoretical framework provided by cognitive linguistics and some of its tools such as cognitive domains metonymy and metaphor our study then is one of the first to apply some of the contributions of cognitive linguistics to lexicography in general and particularly with reference to the hebrew greek and latin versions of the bible a further novel contribution of this research is that the meaning is expressed through a definition and not through a list of possible colour terms as happens in dictionaries or in studies referring to colour in antiquity the definition allows us to delve deeper and discover new nuances that enrich the understanding of colour in the three great civilizations involved in our study israel

how to study the past using data quantitative analysis for historical social science advances historical research in the social sciences by bridging the divide between qualitative and quantitative analysis gregory wawro and ira katznelson argue for an expansion of the standard quantitative methodological toolkit with a set of innovative approaches that better capture nuances missed by more commonly used statistical methods demonstrating how to employ such promising tools wawro and katznelson address the criticisms made by prominent historians and historically oriented social scientists regarding the shortcomings of mainstream quantitative approaches for studying the past traditional statistical methods have been inadequate in addressing temporality periodicity specificity and context features central to good historical analysis to address these shortcomings wawro and katznelson argue for the application of alternative approaches that are particularly well suited to incorporating these features in empirical investigations the authors demonstrate the advantages of these techniques with replications of research that locate structural breaks and uncover temporal evolution they develop new practices for testing claims about path dependence in time series data and they discuss the promise and perils of using historical approaches to enhance causal inference opening a dialogue among traditional qualitative scholars and applied quantitative social scientists focusing on history quantitative analysis for historical social science illustrates powerful ways to move historical social science research forward

includes articles as well as notes and other features about mathematics and the profession

cutting edge machine learning principles practices and applications this comprehensive textbook explores the theoretical underpinnings of learning and equips readers with the knowledge needed to apply powerful machine learning techniques to solve challenging real world problems applied machine learning shows step by step how to conceptualize problems accurately represent data select and tune algorithms interpret and analyze results and make informed strategic decisions presented in a non rigorous mathematical style the book covers a broad array of machine learning topics with special emphasis on methods that have been profitably employed coverage includes supervised learning statistical learning learning with support vector machines svm learning with neural networks nn fuzzy inference systems data clustering data transformations decision tree learning business intelligence data mining and much more

a straightforward presentation of the four different statistical methods of inductive inference with discussion of the basic technical and mathematical material methods are examined from both philosophical and

critical standpoints
