the symposium on vertical reference systems veres was initiated on the occasion of the xxii general assembly of the international union of geodesy and geophysics iugg birmingham 1999 by professor dr wolfgang torge past president of the international association of geodesy lag and representative of lag to the pan american institute of geography and history paigh the idea was to organise another joint symposium of lag and paigh like the previous one held during the xx iugg general assembly at vienna austria in 1991 good reasons for such a joint symposium were the great success and the ongoing activities of the project on the south american geocentric reference system sistema de referencia geocentrico para america del sur sirgas being sponsored by lag and paigh since 1993 the sir gas project working group i had presented a continental south american reference frame of 58 stations during the lag scientific assembly at rio de janeiro in 1997 this reference frame was already adopted by several south american countries as the basis for their new national horizontal geodetic datums sirgas working group ii to overcome the problems of the heterogeneous vertical height datums between the individual countries sirgas had installed its working group iii vertical datum in 1997 as the discussion on the unification of vertical reference systems is also going on in lag and other bodies of science and practice it was decided to dedicate the symposium to this topic

every four years the international association of geodesy meets at the iugg general assembly and this has always been an important event for iag to make the point on where are we going as geodesists both in terms of scientific production as well as in terms of organization the proceedings of iag at the sapporo 2003 general assembly are the mirror of our scientific achievements and as geodesy is a living entity like any other science we could say it is a way to see the picture of what we consider our field of applications as well as of theoretical speculations let us examine this aspect in terms of what are the object of our research the methods we use the general scientific results we can produce our object here i would like to use a pseudo helmert definition the object of geodesy is knowing the surfaces of the earth the geometric surface by positioning and e m surveying and the physical surface i e the gravity field by land marine or satellite gravimetry and their time variations this object is naturally interlaced with other physical properties of the earth both through deep processes affecting its surface and through the gravity field at all different scales from the global to the regional and local where most engineering applications take place
